

Grade 3 Science Project

Name _____

March 12, 2012

- 1) In April we will have every student demonstrate something learned in Science this year. You will look at all the topics we have covered in class or will soon cover. Decide what most interests you and think of an experiment, demonstration, or lesson that you would like to present to the class.
- 2) Discuss your ideas at home. You may choose a Quick Lab or Explore Activity from our test book or select a project from a different source. Mrs. Grace has several books of ideas if you cannot think of something.
- 3) Submit your top five ideas with fun-sounding titles (explain) to Mrs. Grace on Tuesday, March 20. I will let you know which one I want you to do. This will prevent several children from doing the same demonstration.
- 4) You will be assessed on the following rubrics:
 - a) Fill out and hand in the attached form.
 - b) speak in a clear, loud voice so everyone in the room can hear.
 - c) Explain what the project is, demonstrate or show it, and tell what chapter of our book it goes with.
 - d) It should be neat, and you need to have all the supplies, charts, etc., that you need. It should be well-rehearsed at home.
 - e) You may use charts, graphs, posters, or note cards if you wish.
day.
 - f) **See page S7 at the front of our book before you begin.**
